***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 5, 18, and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Malinauskas et al U.S. Patent 6,117,031.

Malinauskas et al disclosed a ball comprising a timer (19) integrated with the ball for measuring at least one predetermined time; at least one sound generator (15) integrated with the ball; the sound generator for producing at least one sound based on the predetermined time period (see column 4, lines 28-30) (applicant's claims 1, 18, and 21); a switch (20) for activating or deactivating the timer and sound generator, such switch is considered a reset (applicant's claim 5).

Art Unit: 3714

Claims 1, 16, 18, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Mathers U.S. Patent 6,578,527.

Mathers disclosed a ball comprising at least one timer integrated with the ball for measuring at least one predetermined time period (column 3, lines 53-56); at least one sound generator (15) integrated with the ball; the sound generator for producing at least one sound based on the predetermined time period; a motion detector (14) integrated with the ball.

***Allowable Subject Matter***

Claims 2-4, 6-15, 17, 19, 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
